#### Abstract

The present study was conducted in Marathwada region of Maharashtra state during the year 2021-22 with the objective to study "Training needs of dairy farm women in dairy farming." One districts namely Hingoli was selected randomly from Marathwada region. Four talukas from each selected district and three villages from each talukas were selected randomly for the study. From each selected village, ten farmers those having cows, buffaloes, goat and other dairy animals were selected randomly, in this way total 120 respondents were considered for the study. The detailed analysis of profile characteristics of farm women indicated that majority of the farm women were medium aged (63.34%), educated up to middle school level (33.43%), joint family type (72.50%), medium size family (76.67%), majority of married women (79.17%), medium herd size (67.50%), majority of occupation is agriculture and livestock (66.68%), medium dairying experience (76.67%), medium level of annual income i.e. Rs. 76,489 to Rs. 3,05,678 (78.34%), medium social participation (75.83%), medium extension contact (64.17%), medium mass media exposure (54.17%), medium economic motivation (61.00%).

**Keywords:** Profile of dairy farm women, training needs, dairy farming

#### Introduction

Livestock is an important segment of agricultural sector in India as it makes multifaceted contributions to socio-economic uplift of the rural poor. Livestock in India is kept mainly by the small holders and the landless that constitute bulk of rural population. Thus by being an important means of income and employment, livestock helps to alleviate poverty and smoothers income distribution in the process assuring a balanced development of rural economy.

Indian agriculture and dairy still assumes the characteristic of traditional farming because of reluctance of farming population particularly the old aged to accept the modern technology. Rural youth are expected to be more progressive than old people. Undeniably, the youth constitute a vast reservoir of energy especially in developing countries including India. Out of the total population of India, those in the age group of 15 to 35 years constitute 40 per cent young people, men and women are available for bringing about the development at local, regional and national level.

#### Material and Methods

The present study was conducted in Marathwada region of Maharashtra state during the year 2021-22 with the objective to study "Training needs of dairy farm women in dairy farming." One districts namely Hingoli was selected randomly from Marathwada region. Four talukas from each selected district and three villages from each talukas were selected randomly for the study. From each selected village, ten farmers those having cows, buffaloes, goat and other dairy animals were selected randomly, in this way total 120 respondents were considered for the study. An Ex-post-facto research design was followed for the study. Data was gathered using a well-structured interview schedule created with the study's objectives in mind. The collected data was analysed, classified and tabulated. Statistical tools such as frequency, percentage, mean, standard deviation, and coefficient correlation were used to interpret findings and draw conclusions.

**Result and Discussion**  
**Profile of farm women**

**Table 1:** Profile of farm women

Sr. No.	Characteristics	Farm women (n = 120)	
		Frequency	Percentage
1	<b>Age</b>		
	Young (Up to 30 years)	24	20.00
	Middle (31 to 47 years)	76	63.34
	Old (48 years & above)	20	16.66
2	<b>Education</b>		
	Illiterate (0)	17	10.00
	Primary school level (1 <sup>st</sup> – 4 <sup>th</sup> std)	37	30.84
	Middle school level (5 <sup>th</sup> – 10 <sup>th</sup> std)	40	33.43
	High school level (11 <sup>th</sup> – 12 <sup>th</sup> std)	19	15.84
	Graduate (13 <sup>th</sup> – 15 <sup>th</sup> std)	7	05.84
3	<b>Family type</b>		
	Nuclear	33	27.50
	Joint	87	72.50
4	<b>Family size</b>		
	Small (up to 3 members)	5	4.16
	Medium (4 to 9 members)	92	76.67
	Large (above 10 members)	23	19.17
5	<b>Marital status</b>		
	Unmarried	2	1.67
	Married	95	79.17
	Divorce	12	10.00
	Widower	11	9.17
6	<b>Herd size</b>		
	Low (up to 4)	23	19.17
	Medium (5 to 10)	81	67.50
	High (above 11)	16	13.33
7	<b>Occupation of family</b>		
	Livestock	2	01.68
	Agriculture + Livestock	80	66.68
	Agriculture + Livestock + Services	6	05.00
	Agriculture + Livestock + Business	14	11.68
	Agriculture + Livestock + Others	18	15.00
8	<b>Dairying Experience</b>		
	Low (up to 3)	16	13.33
	Medium (4 to 12)	92	76.67
	High (13 & above)	12	10.00
9	<b>Annual Income</b>		
	Low (up to Rs. 76,488/-)	10	08.34
	Medium (Rs.76,489/- to Rs. 3,05,678/-)	94	78.34
	High (Rs.3,05,679/-)	16	13.34
10	<b>Social Participation</b>		
	Low (up to 2 years)	12	10.00
	Medium (3 to 13 years)	91	75.83
	High (14 & above)	17	14.17
11	<b>Extension contact</b>		
	Low (up to 8 years)	19	15.83
	Medium (9 to 13 years)	77	64.17
	High (14 years & above)	24	20.00
12	<b>Mass media Exposure</b>		
	Low (up to 4)	27	22.50
	Medium (5 to 7)	65	54.17
	High (8 & above)	28	23.34
13	<b>Economic Motivation</b>		
	Low (up to 20)	22	18.00
	Medium (21 to 25)	73	61.00
	High (26 & above)	25	21.00

**Age**

According to table 1. more than half of the farm women (62.34%) belonged to the middle age group, followed by the old age group (16.66%), and the remaining (20.00%) belonged to the young age group. This could be because the middle-aged farm women were actively working in various fields. The finding was more or less in conformity with the findings reported by Sharma *et al.* (2022)<sup>[6]</sup>.

**Education**

According to table 1 the majority (33.43%) of farm women were educated up to the middle school level, followed by primary school level (30.84%) and high school level (15.84%), respectively, graduate (05.83%) and illiterate (10.00%). Farm women had middle school level because of lack of suitable schooling facilities. Similar findings are supported by Sharma *et al.* (2022)<sup>[6]</sup>.

**Fig 1:** Conceptual model

**Family Type**

The table 1. indicate that majority of farm women (72.50%) belonged to joint family, while 27.50 per cent farm women were belonged to nuclear family. Because of joint family respondent got more time to look after their dairy enterprise. This finding was more or less in conformity with the findings reported.

**Family size**

Data depicted in table 1.concluded that more than half (76.67%) of the farm women belonged to medium size family, followed by 19.17 per cent from large family and only 4.16 per cent of the farm women were from small family. This might be due to the fact that dairy farming has many activities which cannot be managed by women. There should be a cooperative and trustful family who helps to upgrade dairy farming skills and make it a profitable venture. This finding was more or less in conformity with the findings reported by Sharma *et al.* (2022)<sup>[6]</sup>.

**Marital Status**

Data depicted in table 1. concluded that majority of the farm women belonged to married category (79.17%), 10.00 per cent farm women belonged to divorce category, followed by 9.17 per cent farm women belonged to widower category while 1.67 per cent farm women belongs to unmarried category. This may be because the married women got financial support from their husband for doing dairy farming. This finding was more or less in conformity with the findings reported by Kaur (2015).

### **Herd Size**

The above table 1. indicated that, majority of the farm women (67.50%) possessed medium herd size (5 to 10 animals), followed by 19.17 per cent (up to 4 animals) and 13.33 per cent (above 11 animals) of farm women possessed low and high herd size respectively. It may be due to the fact that women were involved in most of the household chores so they can manage medium herd size efficiently. Medium herd size helped them to spend their valuable time with their family members and has long economic impacts. This finding was more or less in conformity with the findings reported Sharma *et al.* (2022)<sup>[6]</sup>.

### **Occupation of family**

The table 1. shows that great majority (66.68%) of the farm women were engaged in agriculture as well as livestock. 15.00 per cent farm women were engaged in agriculture + livestock + others occupation. Whereas 11.68 percent farm women were engaged in agriculture + livestock + business occupation and 5.00 percent farm women were engaged in agriculture + livestock + service occupation. Only 1.68 percent farm women were engaged in livestock occupation. It may be due to as all of the farm women are dairy farm women hence they have agriculture + livestock as their main occupation. This finding was more or less in conformity with the findings reported.

### **Dairying Experience**

The table 1 shows that majority (76.67%) of the farm women had medium dairying experience while 13.33 per cent of the farm women had low dairying experience, whereas 10.00 per cent of them were found in high dairying experience category. This may due to all the selected farm women are middle aged. This finding was more or less in conformity with the findings reported Sharma (2020)<sup>[6]</sup>.

### **Annual Income**

It is revealed from Table 1 that, majority (78.34%) of the farm women were from medium annual income category, whereas 13.34 per cent of them from high annual income category, while 08.34 per cent were from low annual income category. It may be due to majority of farm women had medium herd size hence annual income is medium. This findings were supported by Sharma *et al.* (2022)<sup>[6]</sup>.

### **Social Participation**

Table 1. indicated that the majority of the farm women (75.83%) had medium social participation while 14.17 per cent of them had high social participation and 10.00 per cent of low level of social participation, respectively. This may due to farm women not get much time for social participation because of their household work and dairy work. This finding was supported.

### **Extension Contact**

The data presented in table 1 concluded that more than half (64.17%) of the farm women had medium level extension contact, followed by 20.00 per cent had high level of extension contact and remaining 15.83 per cent of the farm women had low level of extension contact. It may be due to farm women not having that much freedom to go out of their home and contact to different personnel for getting

knowledge. Similar findings was supported Sharma *et al.* (2022)<sup>[6]</sup>.

### **Mass Media Exposure**

The data presented in table 1 concluded that majority (54.17%) of the farm women had medium mass media exposure, while 23.34 per cent of the farm women had high mass media exposure and 22.50 per cent of them had low mass media exposure. This may be due to farm women not having time for using different mass media because of their busy schedule Similar findings was supported by Sharma *et al.* (2022)<sup>[6]</sup>.

### **Economic Motivation**

Table 1 highlighted that majority (61.00%) of the farm women were in medium economic motivation category, while 21.00 per cent of the farm women were in high economic motivation category and 18.00 per cent of them were in low economic motivation category. The dairy farm women are not much more aware about getting economic benefit from dairy venture. Hence, they having medium economic motivation. This finding were supported by Sharma *et al.* (2022)<sup>[6]</sup>.

### **Conclusion**

The study conclusively proven that profile of farm women in dairy farming, more than half of the farm women belonged to the middle age group, majority of farm women were educated up to the middle school level, majority of farm women belonged to joint family, majority more than half of the farm women belonged to medium size family, majority of the farm women belonged to married category, majority of the farm women possessed medium herd size (5 to 10 animals), majority of the farm women were engaged in agriculture as well as livestock, majority of the farm women had medium dairying experience, majority of the farm women were from medium annual income category, majority of the farm women had low social participation, majority more than half of the farm women had medium level extension contact, majority of the farm women had medium mass media exposure, majority of the farm women were in medium economic motivation category.
